Innovation Rodeo 2022

When watching the Innovation Rodeo 2022 video it involved a group of people that were pitching their ideas to AFIMSC to win an investment of funds into their projects. All of the pitches were Tech-focused and hosted by the Tech Port Center plus Arena where new applied technologies were being brought to light.

I was watching them before their pitching moments and I was really shocked about how calm and confident they were. Through that I see confidence is all you need, all of them had really good pitches and were passionate about what they believed was worth investing in. This mostly taught me the idea we ourselves may think is small, a lot of others believing in it can bring it to a bigger light. I think it was cool how even if their ideas were not invested in they still got to learn from the judges which were leading innovators. They also got to network with their peers.

I know that prior to this many others got similar opportunities and a bunch of money has been invested into many of these projects. The project that sparked my interest the most was the adventure style video game not because it was a game but because the game was teaching positive psychology to the Airmen. Other projects I learned about in the Innovation Rodeo 2022 video were more on the lines of creating special hardware either for fitness, better/upgraded technology or more appropriate equipment. One idea was about After Hour fitness Center that gave users fitness center access registration sites so if they move they won't have to re register. There was a Network Bandwidth Expansion allowing bigger expansions/ higher quality to existing networks. I was learning about Technology development and Integration which is basically the use of resources of our technology. In the video it was pitches about Technology development except for most of the pitches were about improvements and better ways to use technology that's already been invented. The newer age technology for the Airmen to Integrate and do what they have to do in easier less stressful ways
